

Backup & Recovery

73% or nearly 3 out of 4 companies could not adequately recover their data after experiencing a significant incident.

It's not the tornado, flood, or fire you should be concerned about. According to several studies human error and equipment failure account for nearly 75% of downtime experienced by companies. In fact, natural disasters only cause 5-12% of outages. The bottom-line—regardless of whether your downtime is caused by a careless employee or outdated firmware, the question is not **IF** disaster will strike but **WHEN**.

Diminish Downtime with SAFENAV

If someone unplugged your server today—are you confident you could reach your required Recovery Time Objective (RTO) or Recovery Point Objective (RPO)? With ACS' SAFENAV Backup & Recovery Managed Services, you'll never again have to question whether you'll meet your RTO and RPO requirements.

INCLUDES:

- Secure, reliable, certified data protection infrastructure
- Compliant backup and recovery processes with regard to HIPPA, GLBA, and Sarbanes-Oxley
- Multiple options for data recovery
- On-call DR specialists available 24x7

We'll work with you to determine your most critical and vulnerable operations. Then our certified consultants and engineers will select from industry leading technologies to architect a custom solution that fits your needs, always keeping your RTO, RPO, and budget at the forefront of their decisions.

RECOVER QUICKLY

- Online automated backup and recovery service
- Secure, reliable, and efficient protection of your company's most critical information
- Your information is compressed, encrypted, and transmitted to a vault in our data center

Put your Systems to the Test

ASSESS: We'll identify which of your critical systems will keep running like business as usual and which will leave you in the dark when you need it most. Our Business Continuity (BC) Gap Analysis includes a comprehensive report and remediation recommendations.

PLAN: Our Backup & Recovery professionals will work with you to develop a best-in-class Plan based on the results of your BC Gap Analysis.

TEST: Put your plan into action with a Backup & Recovery Test. We'll perform a full system restore to ensure that during a true emergency, your systems will operate like business as usual.

Each report includes documentation and recommendations from our Backup & Recovery experts to ensure you reach your RTO and RPO every time.

Your information is too important to leave it up to chance. Speak to one of our trusted technology advisors today to learn more about SAFENAV Backup & Recovery Managed Services from ACS today.
